SHRAVNI JEHURKAR

9175407463 | shravni.jehurkar@gmail.com | LinkedIn | GitHub

Technical Skills

Languages: Python, C++, JavaScript, TypeScript, SQL, HTML, CSS
Web/Backend: React, Angular, Node.js, Express.js, FastAPI, REST APIs
Data/ML: PyTorch, TensorFlow, OpenCV, NumPy, Pandas
Tools: Git, GitHub, Three.js

Education

Vellore Institute of Technology *Sept 2023 – May 2027*
B.Tech, Computer Science and Engineering (Artificial Intelligence and Machine Learning) | *CGPA: 8.81*

Experience

Forward Deployed Engineer Intern – ALTEN India *Jun 2026 – Sep 2026*

- Worked on the DCC application supporting MBRDI engineering and digitalization use cases, ramping up through technical walkthroughs.
- Built frontend features in React and TypeScript and backend services in FastAPI, integrating them over REST APIs into end-to-end workflows.
- Tested, debugged, and refined features across the full stack to ship working application functionality.

AI Intern – BharatSkillz, Jaipur, India *May 2025 – Jul 2025*

- Worked on computer vision and sequence-modeling problems, applying deep learning to practical AI tasks during the internship.
- Built and trained CNN models for computer vision and RNN models for sequence modeling, covering data preprocessing, training, and evaluation.
- Owned the full ML pipeline end to end, delivering trained and evaluated models for both task types.

Projects

Fake Certificate Detection – Python, FastAPI, TensorFlow, DenseNet121, React *Aug 2026 – Oct 2026*

- Built a full-stack system that detects forged academic certificates by combining three independent checks: image-forgery detection, OCR with database matching, and signature verification.
- Fine-tuned a DenseNet121 forgery classifier on Error Level Analysis (ELA) images, achieving 83–88% accuracy, and served it with the OCR and signature models through a single FastAPI endpoint.
- Built a React + TypeScript dashboard where users upload a JPG or PNG certificate and see the forgery probability, OCR confidence with database match, and signature similarity score on one screen.

3D Digital Twin: Production Line – Angular, TypeScript, Three.js, Node.js *Apr 2026 – Aug 2026*

- Built a real-time 3D digital twin of a beverage manufacturing line in Angular and Three.js, simulating automated production workflows across multiple machines and conveyors.
- Engineered a state-driven simulation engine that synchronizes conveyor, bottle, and machine behavior, backed by a Node.js REST API.
- Designed a modular machine architecture so new production stations can be added without changing the core simulation, and added machine editing, alarms, and undo/redo for a fully configurable factory environment.

Goaldigger: Career Guidance Website – React, Node.js, Express *Feb 2026 – Apr 2026*

- Built a career-guidance platform based on the Japanese Ikigai framework to help students map their interests to suitable career paths.
- Led product design and vision end-to-end, designing dynamic questionnaires that match user responses to career paths.
- Adopted by 500+ students, achieving a 4.8/5 CSAT score.

Co-curricular Activities

- Cultural Lead, Marathi Club
- Event Management Lead, Marathi Club
- Finance Co-Lead, Gujarati Club

Certifications

- GenAI Using IBM Watsonx – IBM Career Education Program
- Cloud Computing, Introduction to Industrial IoT – NPTEL
